

Media Winding Made Easy

Citizen MediaWinder

The **MediaWinder MW115** and **MW215** are compact size, high performance rewinders for collecting label output from Citizen label printers.

Our rewinders use a simple, integrated, mechanical clutch on the media spindle to adjust the tension applied to the roll as it winds. This is instead of a 'floating arm' or electronic sensing which are less reliable or cause pulsing and tugging on the media.

The variable tension can be easily increased or decreased using the torque adjuster on the end of the media bar.

- ◆ Easy-to-use design
 - ◆ No tension control arm to interfere with the rewinding process
 - ◆ Roll capacity up to 6 inches / 150 mm outside diameter
 - ◆ Media width up to 4.75 inches / 120 mm
 - ◆ Core size of 1.5 inches / 38 mm as standard
 - ◆ Paper can be wound tight or loose by adjusting torque setting
 - ◆ Quick and easy media setting using media clamp
 - ◆ Equally easy to remove by simply sliding out the media clamp.
- ◆ The **MediaWinder MW115** is designed for printers printing at 4 inches per second such as the CLP 521 and CLP 621
 - ◆ The **MediaWinder MW215** is designed for printers printing at 7 inches per second such as the CLP 7201e and CLP 7202e
